

RFP Response: Apex Systems

Procurement request: Customer Support Ticketing Platform Migration

Executive Summary

Apex Systems proposes a cloud-native migration built on a microservices architecture with horizontal auto-scaling, addressing current peak-hour load issues.

Proposed Solution & Architecture

Kubernetes-based microservices with dedicated ticket routing, SLA tracking, and reporting services. REST/GraphQL APIs, native Salesforce/Slack/Zendesk integrations, and a Kafka event bus. Designed for 10x current volume without re-platforming.

Implementation Plan, Team & Milestones

7-month phased plan: Discovery (4wk), Core Build (12wk), Integration & Migration (8wk), UAT (3wk), Cutover & Hypercare (3wk). Dedicated team of 9 including 2 architects and a security engineer. Documented mitigation and rollback plans for each key risk.

Milestone	Week	Deliverable
Discovery complete	4	Signed architecture doc
Core platform beta	16	Internal beta
Integrations complete	24	Staging integrations live
Go-live	30	Production cutover

Commercial Value

Total cost \$486,000: \$360,000 implementation, \$66,000 first-year support, \$60,000 contingency (12%). Fixed-bid; change requests at \$185/hour.

Line item	Cost (USD)
Implementation	\$360,000
Year 1 support	\$66,000
Contingency	\$60,000
Total	\$486,000

Security, Compliance & Risk Controls

SOC 2 Type II and ISO 27001 certified. AES-256 at rest, TLS 1.3 in transit. RBAC, full audit logging, annual third-party pen testing shared with client. 4-hour critical incident SLA.

Support Model, Experience & References

24/7 tier-1 helpdesk, 1-hour critical SLA. 6 similar migrations completed in 4 years for mid-size enterprises. Two references available (telecom, insurance).
