

RFP Response: Northstar Integration Group

Procurement request: Customer Support Ticketing Platform Migration

Executive Summary

Northstar Integration Group specializes in complex, multi-system integrations for organizations with a large existing tool ecosystem.

Proposed Solution & Architecture

Integration-hub architecture connecting the new ticketing platform to 12+ existing internal systems via a custom middleware layer. Highly configurable but requires significant upfront integration mapping.

Implementation Plan, Team & Milestones

Estimated 8-10 months; exact duration depends on the number of legacy systems requiring integration, to be finalized after a technical discovery workshop. Team size scales with integration count (estimated 7-14 people).

Phase	Estimated duration
Technical discovery	4-6 weeks
Middleware build	16-24 weeks
Integration testing	8-12 weeks
Go-live	2-4 weeks

Commercial Value

Base implementation estimated at \$410,000, with each additional legacy system integration priced at \$18,000-\$35,000 depending on complexity. Final total to be confirmed after discovery.

Line item	Estimated cost (USD)
Base implementation	\$410,000
Per-system integration	\$18,000 - \$35,000 each
Year 1 support (est.)	\$55,000

Security, Compliance & Risk Controls

Certifications vary by underlying platform components used; a consolidated security posture document will be provided during discovery. No unified certification held by Northstar itself.

Support Model, Experience & References

Support model depends on final integration architecture; typically a dedicated integration engineer plus standard business-hours helpdesk. 7 similar multi-system integration projects completed. Three references available.
